

VISCO 4.7 Release Notes

- 1) Quotes have received the 4.x upgrade! Like almost all other VISCO edit screens, fields in the Quote edit screen can be moved from tab to tab and new fields can be added in any existing tab or the header. Quote Lines and Shipments also have the same functionality, and each field can have Tool Tips added or Required-ness set as well
- 2) In Inventory Allocation – the icons that appear in the inventory “pop-up” that shows venture portions available for allocation can now be altered to any image or icon you would like and that image can be altered based on the information displayed in the icon. For example, one customer chose a RED WARNING icon to alert them when that venture had spent more than 60 days in inventory, while newer inventory would stay in the traditional blue color of the icon.
- 3) In Inventory Allocation – we can now sort the list of ventures in the inventory “pop-up” in any order you prefer with relatively minor code changes.
