

## VISCO Release 4.6 Notes

- 1) Offers have received the 4.x upgrade! Like almost all other VISCO edit screens, fields in the Offer edit screen can be moved from tab to tab and new fields can be added in any existing tab or the header. Offer Products/Terms also have the same functionality, including newly available custom fields for each Offer Product.
  
- 2) We are now using Google Maps for reliable domestic and international address location services. Click the  next to any address to see that address, get directions or search nearby in Google Maps.
  
- 3) We added Exchange Rate as a column for Venture Distribution in Cost Entry.
  
- 4) We gave users (with appropriate permissions) the ability to turn on/off their integration or change QB integrations from toolbar on virtually all VISCO screens.
  
- 5) Cost Entry Posting optimizations: We have sped up Cost Entry Posting and included some important details (batch # and Cost Association) about each cost posted that will appear as comments in Venture Analysis and in your Cost Entry Details report in VISCO.
  
- 6) We can now convert any or all system generated documents to load as PDF rather than Excel/Word files: PO, SO, Invoice, Delivery Order etc. Any document can immediately be a PDF when loaded VISCO, but you will lose all available controls (buttons, checkboxes, etc.) for auto email etc. if you choose to do this.
